Visa: UAE Residence Visa (family-sponsored) | Notice Period: 30 days

PROFESSIONAL SUMMARY

Full Stack Developer with 3+ years building and shipping production web applications and cloud-native systems in the UAE. Specialised in real-time AI systems and Kubernetes-deployed APIs, with end-to-end ownership from Next.js frontends through Node.js/FastAPI services to AWS EKS infrastructure and CI/CD. Delivered a real-time agentic AI avatar product end to end — the media pipeline, the public API, its Node.js client SDK, and an embeddable JS widget used by external partners. First Class Honours in Software Engineering.

TECHNICAL SKILLS

Frontend: Next.js, React.js, Vue.js, Nuxt.js, Tailwind CSS, React Native, embeddable widgets (vanilla JS, Shadow DOM)

Backend: Node.js, Express.js, Fastify, FastAPI, REST APIs, WebRTC, MediaSoup SFU

Languages: TypeScript, JavaScript, Python, C#, Java, SQL

Databases: PostgreSQL, MySQL, MSSQL, MongoDB, Supabase

Cloud & DevOps: AWS (EKS, EC2, S3, Lambda, RDS, Cognito, AppSync, Amplify), GCP (Cloud SQL, Compute), Azure (Serverless Functions), Docker, Kubernetes, Nginx, GitHub Actions (CI/CD)

AI & Real-Time: OpenAI, Anthropic, AWS Bedrock, Azure AI Foundry, ElevenLabs (Scribe STT / TTS), Whisper, GAN inference on H100, streaming inference pipelines, WebRTC, MediaSoup SFU, client-side VAD

Tools & Practices: Git, GitHub, Jira, Figma, GA4, GTM, monitoring & infrastructure automation, Agile

PROFESSIONAL EXPERIENCE

Full Stack Developer (Hybrid) Jul 2025 – Present

Koninfotech — Dubai Silicon Oasis, UAE

- Architect and maintain a multi-service platform spanning Next.js (studio + admin dashboard), Express.js (internal backend) and FastAPI (public API).
- Architected the end-to-end pipeline for a real-time agentic AI avatar (speech → LLM → ElevenLabs TTS → lip-sync GAN → WebRTC/MediaSoup delivery), achieving sub-second (~800 ms) conversational turn latency on H100 GPU inference.
- Designed and deployed a scalable public API on AWS EKS, reducing the time required for client integrations.
- Owned the partner integration surface: published the official Node.js client SDK (npm) and a vanilla JS embed widget served via CloudFront, reducing partner onboarding from ~5 days to under 1 day.
- Implemented CI/CD pipelines with GitHub Actions and Slack notifications, cutting release time from ~40 minutes of manual work to under 8 minutes and enabling 5+ deployments per week.
- Managed cloud infrastructure across AWS and GCP (EC2, EKS, S3, Lambda, Cloud SQL), reducing monthly spend by ~30% through rightsizing and autoscaling.
- Refactored backend services to improve p95 API response time from ~900 ms to ~250 ms (~70% reduction).
- Introduced proactive monitoring and infrastructure automation, sustaining 99.9% uptime and cutting mean incident response time by ~50%.

Web Developer (Remote) Apr 2023 – Jul 2025

Viewit — Dubai, UAE

- Maintained and optimised the Express.js backend and Nuxt.js frontend of a production property platform serving 10,000+ monthly active users.
- Designed scalable backend infrastructure on Azure using Fastify, supporting 100,000+ requests/day.
- Built Azure Serverless Functions automating email and WhatsApp workflows, handling 5,000+ messages per month and removing ~6 hours of manual work weekly.
- Integrated a headless WordPress blog system and technical SEO improvements, increasing organic traffic by ~40% over 6 months.
- Implemented GA4 and GTM analytics tracking, giving the business conversion visibility across 4 key funnels.
- Supported maintenance and release of the React Native mobile application.

Web & Application Engineer (Contract, Remote) Nov 2023 – Jun 2024
The Corporate Lounge — Florida, USA

- Debugged and optimised React.js web and mobile applications, reducing reported defects by ~35%.
- Built and integrated serverless features using AWS Lambda, RDS, Cognito, AppSync and Amplify.
- Managed Play Store and App Store release pipelines, shipping 12+ production releases.

PROJECTS

Real-Time Agentic AI Avatar | Professional — Koninfotech | *WebRTC, MediaSoup SFU, ElevenLabs, GAN inference, H100*

- Architected and owned the end-to-end real-time pipeline: user speech → client-side VAD → streaming STT (ElevenLabs Scribe, Whisper) → LLM → ElevenLabs streaming TTS → lip-sync GAN inference → synchronised audio and frame delivery to the browser over WebRTC/MediaSoup.
- Achieved ~800 ms conversational turn latency (user stops speaking → avatar begins responding) by endpointing in-browser and feeding TTS audio into inference in chunks to generate 30-frame batches, rather than waiting for complete output.
- Planned GPU capacity against a hard ceiling of 2–3 concurrent sessions per H100, with graceful degradation to audio-only mode when the pool was saturated.
- Built a provider-agnostic LLM layer spanning frontier OpenAI and Anthropic models via AWS Bedrock and Azure AI Foundry.

Public API, Client SDK & Embeddable Widget | Professional — Koninfotech | *FastAPI, AWS EKS, npm, vanilla JS*

- Designed and shipped the complete partner-facing surface for the avatar product — public FastAPI service on AWS EKS, official Node.js client SDK, and a drop-in embed widget — owning both the API contract and the experience of consuming it.
- Built a vanilla JS widget library (mediasoup-client, @ricky0123/vad) that embeds the live avatar on any third-party site via a single <script> tag, isolating DOM and styles from the host page with Shadow DOM and authenticating embeds via scoped session tokens.
- Published and maintain the Node.js SDK on npm (@konpro/js-sdk) and served the widget from S3 behind CloudFront, reducing partner onboarding from ~5 days to under 1 day.

Plugin Electronics — E-Commerce Platform | Next.js 14, Vue 3, Express, PostgreSQL | *plugin-electronics.vercel.app*

- Built the full stack end to end: a Next.js 14 public storefront with paginated catalogue, live inventory levels, and an auth-gated cart and checkout flow, backed by Express and PostgreSQL.
- Built a separate Vue 3 admin panel for product and inventory management.

Swift LMS — Learning Management Platform | Next.js, Supabase | *swift-lms.vercel.app*

- Implemented role-based access control across student, teacher and admin roles, enforced with Postgres row-level security.
- Built real-time chat on Supabase Realtime channels, plus assignment upload, submission and grading workflows.

WINC Library Management System | Two-app system — React | *winc-catalogue.netlify.app*

- Built a student-facing e-catalogue with search alongside a separate librarian-facing admin system for book issuance and member registration.

EDUCATION

B.Eng. (Hons) Software Engineering — First Class Honours 2021 – 2024
University of Bolton, RAK Academic Centre, UAE

CBSE Grade 12, Science — 96% 2020 – 2021
International Indian School, Ajman, UAE
